

Functional Requirements Document

Enterprise Support Operations Analytics

Organization: Star Printers

Prepared by: Prathvi Bhat

Role: Business Analyst

1. Purpose

The purpose of this Functional Requirements Document (FRD) is to define the functional and non-functional requirements for the Star Printers Enterprise Support Operations Analytics solution.

The document translates the approved business requirements defined in the Business Requirements Document (BRD) into specific solution capabilities required to support operational performance analysis and management reporting.

2. Solution Overview

The Star Printers Enterprise Support Operations Analytics solution provides centralized analysis and reporting of enterprise customer-support ticket data for the January–March 2026 reporting period.

The solution uses Microsoft Excel, MySQL, and Tableau to support data validation, KPI analysis, operational analysis, and interactive management reporting. It enables users to monitor ticket volume, SLA compliance, resolution performance, customer satisfaction, workload distribution, customer support demand, and performance across relevant operational dimensions.

3. Functional Requirements

ID	Functional Requirement	Related BR
FR-001	The solution shall display the total number of unique support tickets within the selected reporting period.	BR-001
FR-002	The solution shall calculate and display overall SLA compliance by comparing each ticket's resolution time against its applicable SLA target.	BR-002
FR-003	The solution shall calculate and display the average ticket resolution time.	BR-003

ID	Functional Requirement	Related BR
FR-004	The solution shall calculate and display the average customer rating, excluding tickets where no customer rating was provided.	BR-004
FR-005	The solution shall calculate and display ticket volume by support category, enabling users to identify categories generating the highest ticket volume.	BR-005
FR-006	The solution shall calculate and display SLA compliance by geographic region to enable comparison of regional performance.	BR-006
FR-007	The solution shall calculate and display ticket volume by support department to enable team leads to evaluate workload distribution.	BR-007
FR-008	The solution shall calculate and display average resolution time by issue category to enable management to identify categories associated with longer resolution times.	BR-008
FR-009	The solution shall calculate and display ticket volume by enterprise customer/account to enable management to identify customers generating the highest support demand.	BR-009
FR-010	The solution shall calculate and display average customer rating by support agent to enable team leads to compare customer satisfaction across agents.	BR-010
FR-011	The solution shall provide interactive filters for Region, Priority, Category, and Department, allowing users to refine the displayed analysis based on selected values.	BR-005, BR-006, BR-007, BR-008
FR-012	When a user applies a filter, the relevant dashboard KPIs and visualizations shall update to reflect the selected criteria.	BR-005, BR-006, BR-007, BR-008

4. Data and Calculation Requirements

Functional calculations shall follow the applicable business rules defined in the approved Business Requirements Document (BRULE-001 through BRULE-004).

ID	Data / Calculation Requirement	Related Business Rule
DR-001	Ticket-volume calculations shall count unique Ticket IDs within the applicable reporting and filter context.	BRULE-003

ID	Data / Calculation Requirement	Related Business Rule
DR-002	SLA compliance shall be calculated at ticket level using Resolution Time and the applicable SLA target before being aggregated for reporting.	BRULE-001
DR-003	Average customer-rating calculations shall exclude tickets for which no customer rating was submitted.	BRULE-002
DR-004	Reporting calculations shall use records within the defined January–March 2026 reporting period.	BRULE-004

5. Non-Functional Requirements

ID	Category	Non-Functional Requirement
NFR-001	Usability	Dashboard KPIs, labels, filters, and visualizations shall be presented clearly and consistently to support ease of interpretation.
NFR-002	Data Accuracy	Reported KPI values and analytical results shall be consistent with the validated source data and defined business rules.
NFR-003	Compatibility	The Excel dashboard shall be accessible using Microsoft Excel, and the packaged Tableau workbook shall be accessible using a compatible Tableau environment.
NFR-004	Maintainability	Reporting components shall use clearly defined calculations and field names to support future review and modification.
